

PASTEL FIXED ASSETS

Now anyone can manage their assets with Pastel Fixed Assets! With features like an unlimited number of assets and multiple forms of depreciation, Pastel helps you to control your fixed assets easily, affordably and reliably.

MAIN FEATURES

User defined fields on the fixed assets maintenance screen including drop-down lists and user-defined selections

Pastel Fixed Assets allows you to record, maintain and monitor all your assets. This can be done by making use of an existing list of assets, or creating a customised list of assets.

Track an unlimited number of fixed assets by cost centres or departments

Pastel allows you to create an unlimited number of assets and sub-assets from within one company database that in turn can be allocated against various cost centres and departments for reporting purposes.

Have multiple asset types

Not only does Pastel have a list of pre-defined asset types which range from motor vehicles, computers, office equipment, software, machines, stationery and furniture, but Pastel allows you to add your own user defined asset types.

Capex Budgets and Orders

Create capex budgets for assets and track asset orders against these budgets using the "detail", "summary", "cash flow forecasting" and capex reports to control your purchases.

Multiple Depreciation Methods

Depreciation can be calculated as the following:

- Straight line
- Reducing balance
- Immediate write-off
- Units of usage
- Plant and machinery
- Equal allowance

Utilises Microsoft's popular MS-SQL Database

Microsoft SQL Server is a client-server database management system. SQL Server is designed to meet the most demanding database application requirements for the enterprise, including operational and decision support systems implemented today and in the future.

Competitively Priced

'Value For Money', just as you'd expect from Pastel.
